Form Through Process

UNICON INDUSTRIES

UNICON is a 360° in-house ecosystem; a group of industries that deliver with the highest international standards, proudly produced in Saudi Arabia.

Spanning over 17,000 square meters of factories, UNICON combines decades of accumulated expertise to redefine how industries collaborate, build, and innovate.

In alignment with Saudi Vision 2030, we take pride in being a homegrown force of production and progress, setting new benchmarks for quality and sustainability.

UNICON INDUSTRIES

Each company under Unicon carries its own identity and expertise; yet together, they form a collective that is building the Kingdom's future with precision, purpose, and craftsmanship.

These companies bring together accumulated knowledge and expertise built over decades, carrying forward a reputation rooted in excellence across their respective industries.

Unicraft, elevates woodwork and timeless craftsmanship, creating bespoke, locally produced pieces that embody precision and an eye for detail, celebrating handmade artistry and traditional expertise.

High Technology Contracting Est

Monoline, brings Italian standards and expertise to Saudi Arabia, manufacturing premium systems and glazing locally. By combining European precision with Saudi production, Monoline pioneers a new standard of design and engineering excellence .

MONOLINE

ABOUT US

Unicraft is a subsidiary division of “Saudi Icon Company” established to expand the group’s manufacturing capabilities and provide a comprehensive solution for bespoke joinery and contract furniture.

Backed by a workforce of over 1,800 skilled professionals across the Unicon ecosystem, Unicraft operates alongside the group’s metal and aluminum divisions, enabling full integration between wood, metal, and aluminum.

Spanning over 2800 sqm, the factory specializes in the engineering, manufacturing, and installation of built-in joinery and custom furniture for hospitality and residential projects, delivering precision craftsmanship, scalability, and reliability across all project stages.

OUR SERVICES

Joinery & Custom Fabrication

Engineering, production, and assembly of custom wooden components including doors, wall cladding, counters, and trims. The process involves CAD-based shop drawings, CNC machining, edge banding, and precision assembly to ensure dimensional accuracy and finish consistency.

Furniture Production

Design engineering and mass production of loose and fixed furniture for residential, hospitality, and commercial spaces. Operations include structural design verification, CNC cutting, veneer pressing, sanding, finishing, and assembly with high-quality solid wood and composite materials.

Interior Fit-Outs

End-to-end engineering and execution of interior works covering detailed drawings, material coordination, site measurements, and installation. Scope includes wall and ceiling panels, cabinetry, partitions, and integrated joinery elements coordinated with MEP and architectural requirements.

Specialized Fabrication

Engineering and execution of complex, non-standard wooden and hybrid elements such as curved panels, acoustic systems, perforated surfaces, and mixed-material assemblies combining wood, metal, glass, and solid surfaces.

Driven by the power of human craftsmanship,
UNICRAFT turns wood into timeless stories; mastering
the finest details; merging materials, textures, and the
artisan's eye into bespoke creations.

Featured Projects

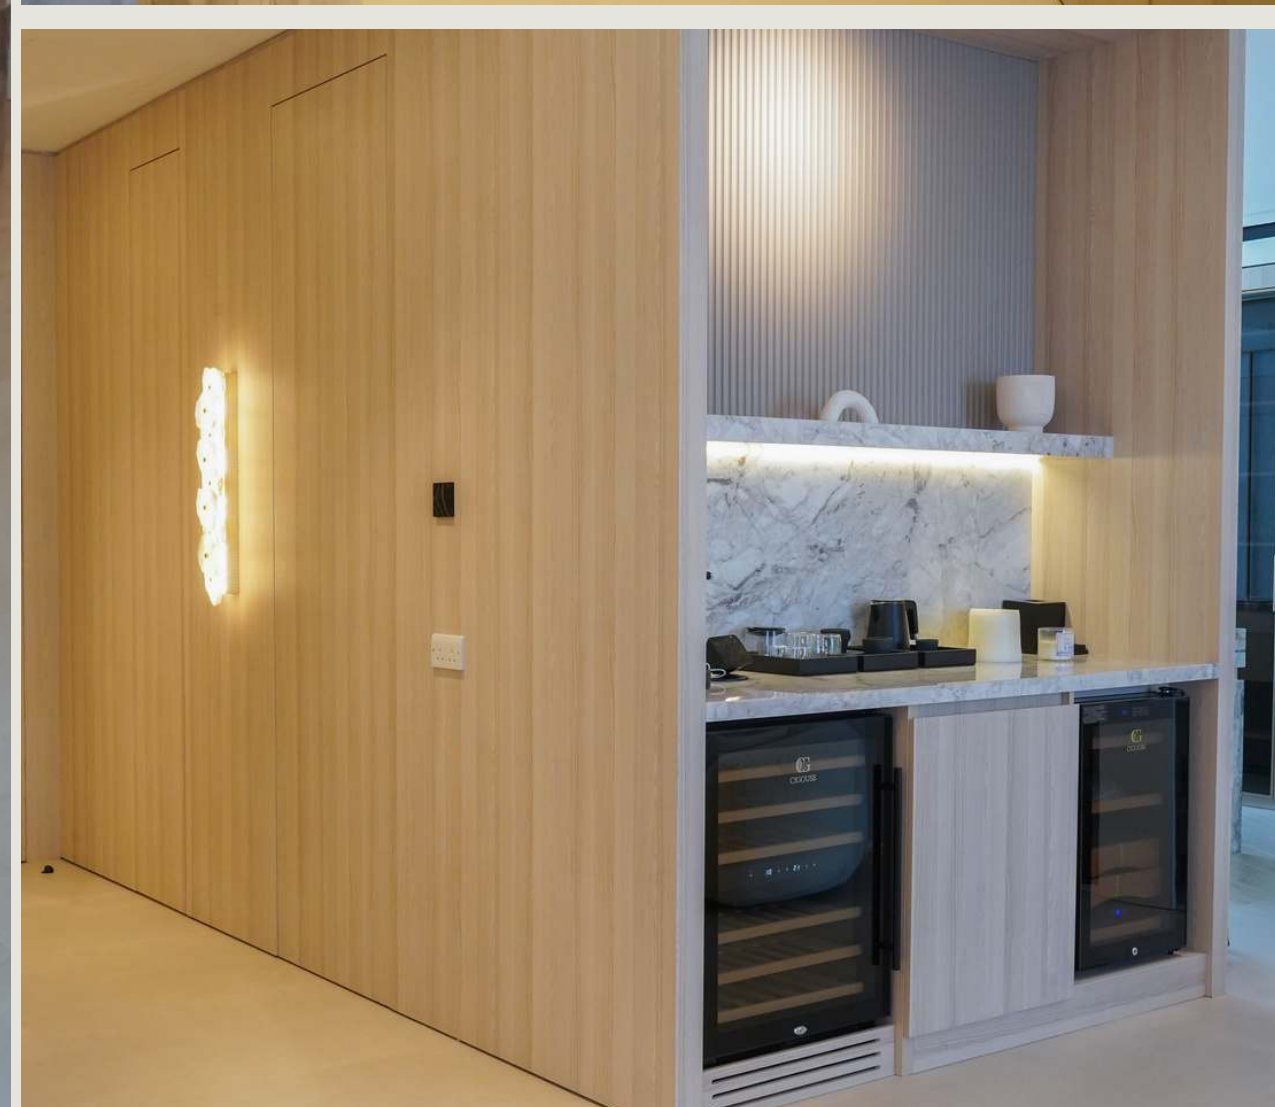

SLS Hotels

The Red sea

Unicraft delivered a full interior fit-out of bespoke joinery for Shura Island, crafted to the highest hospitality standards. Using FSC-certified veneer and teak wood, low-impact MDF, and Sirka sustainable paints, the team met the island's strict environmental specifications. Despite sourcing challenges, all materials underwent and passed Red Sea Global's rigorous inspections, resulting in interiors that embody exceptional craftsmanship and true sustainability.

Featured Projects

RESIDENCE

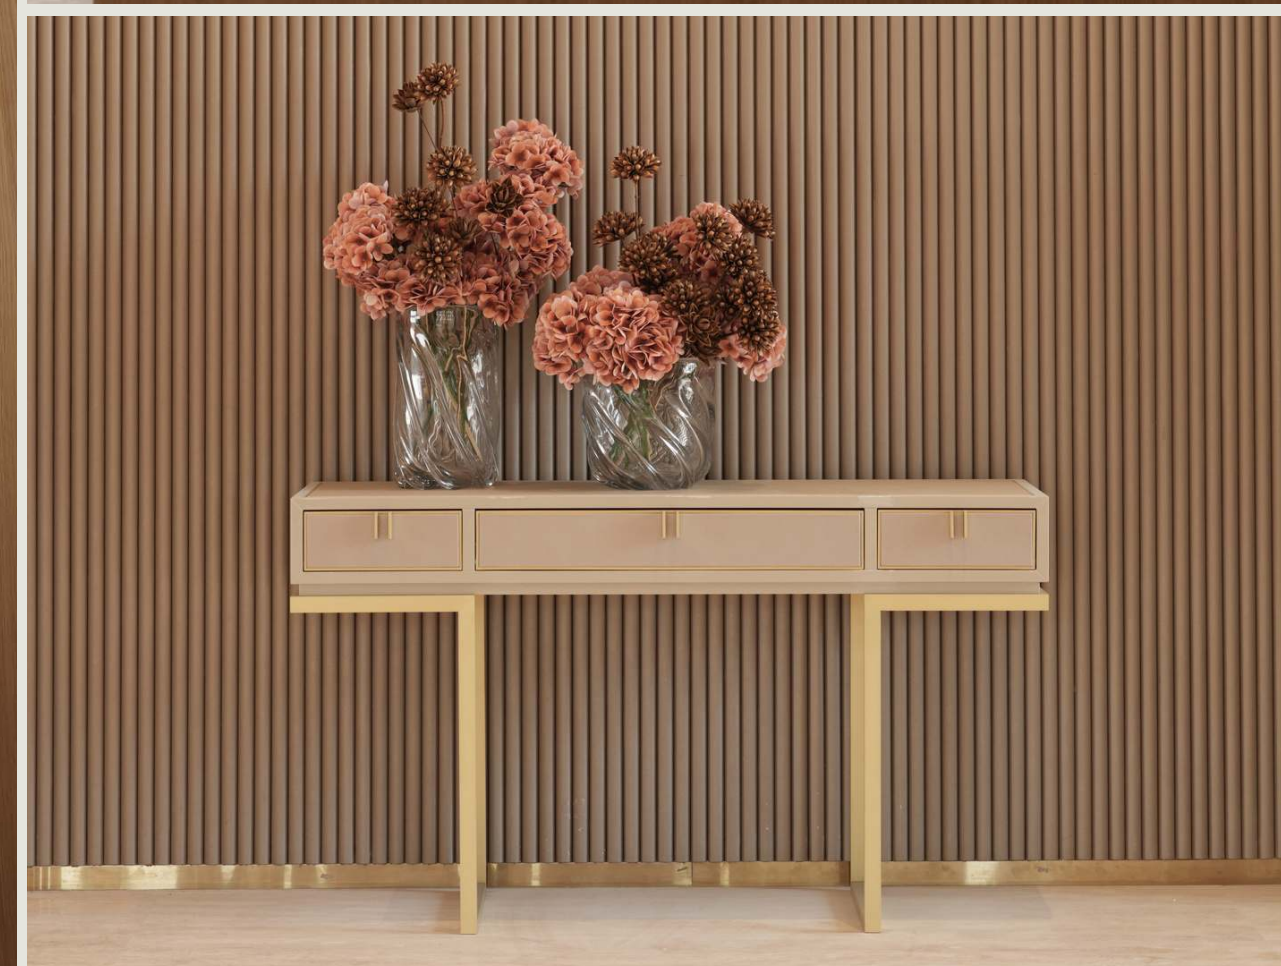

UC1010

Unicraft engineered and executed the complete interior fit-out, including bespoke furniture, kitchens, and bedrooms for this high- end residence. Working in close coordination with other members of Unicon Industries, the team crafted refined cabinetry featuring minimal 1 cm aluminum profiles, elegant glass integrations, and fully equipped show and service kitchens complete with premium accessories.

A key challenge was material sourcing, as the specified HPL was only available in 12 mm panels. Engineering lightweight yet durable doors and architraves to meet both the aesthetic and structural requirements demanded ingenuity and precision—ultimately resulting in interiors that combine functionality, elegance, and technical excellence.

Featured Projects

RESIDENCE

UC1020

Private Residence – Craftsmanship in Every Detail

Unicraft collaborated closely with the project's designers to develop detailed joinery shop drawings that seamlessly integrated onyx, brass, and curved oak wood, elegantly enveloping the majlis area. The team executed all woodworks across a 5,000 sqm private residence, showcasing precision, artistry, and timeless craftsmanship in every element.

A defining highlight is the main entrance door, standing four meters high, meticulously crafted from solid teak wood on the exterior and oak veneer on the interior—a true statement of strength, warmth, and durable design.

OUR MISSION

What We Believe In?

To craft bespoke wood creations that merge traditional expertise with modern precision, celebrating the power of human craftsmanship and the stories told through every grain of wood.

Unicraft stands at the intersection of craftsmanship and scale, combining the artisan's touch with cutting-edge production to create bespoke woodwork for high-end residential and hospitality projects.

Crafted in Riyadh, inspired by its stories, and built to last.

What Drives Us?

To become Saudi Arabia's leading name in handcrafted wood design, known for reviving artisanal traditions and setting new benchmarks for quality, creativity, and authenticity.

OUR PROMISES

thoughtful by [design]

Client-centered philosophy
with tailored solutions.

FSC

Alignment with Vision 2030
sustainability targets.

Integration of modern
technologies & smart materials.

Collaborative mindset with
architects, consultants, and
clients.

UNICRAFT PROJECT LIFE CYCLE

1

Project Planning

- Project briefing and scope review
- Procurement scheduling
- Project timeline scheduling
- Approval of materials and finishes

2

Engineering & Production

- Engineering and issuing detailed shop drawings and material optimization
- Job orders and cutting lists issuing
- Mock-ups and prototype approvals prior to production

3

QA/QC

- In-process inspections during fabrication Quality checks on dimensions, joinery, and finish
- Assembly and high-precision finishing in controlled environment
- Corrective actions and stage approvals
- Final inspection before packaging

4

Packaging & Logistics

- Custom crating and protective wrapping for all units Labeling by zone and project reference
- Coordination of transport, delivery schedules, and storage

5

Installation

- Site delivery and unloading supervision Installation by certified carpentry team
- Alignment, fixing, and finishing on site Inspection with consultant and client representatives

6

Handover

- Final snagging and rectifications
- Submission of as-built drawings and maintenance manual
- Warranty issuance and project close-out documentation

ESG & SUSTAINABILITY PRACTICES

1 Sustainable Material Sourcing

Unicraft prioritizes responsible procurement by sourcing

FSC-certified wood, low-VOC paints, and eco-compliant adhesives.

Engineering and procurement teams ensure material traceability, supplier audits, and waste optimization through digital cut-planning and off-cut reuse systems.

2 Employee Welfare & Training

The workforce operates under structured training programs covering equipment safety, material handling, and process efficiency. Regular safety drills, ergonomic workspace design, and continuous ups-killing in **CNC operation, finishing, and quality control** are part of standard factory protocols.

3 Work Environment & Performance

All teams are trained to perform under **high-volume production timelines** while maintaining precision and quality. The facility is equipped to handle both handcrafted detailing for bespoke projects and high-capacity production lines for bulk manufacturing, ensuring operational flexibility.

4 Health & Safety Compliance

Unicraft enforces strict **HSE standards including PPE usage, ventilation control, noise reduction, and fire-safety systems.** Routine inspections and maintenance schedules are managed through internal audits to comply with Saudi labor and industrial safety regulations.
